

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

Importing and **Exporting** data from and into different files.

2. What parts of encapsulating your logic were hard?

Creating new **functions** and separating those functions into smaller **codebases/Modules**.

3. Is abstracting the book preview a good or bad idea? Why?

It's a good idea, because it makes the code look clean and easy to read, even though it might be challenging to apply the abstraction on it.
